

## **MARKED-UP VERSION OF ABSTRACT OF THE DISCLOSURE**

Please delete the Abstract and replace it with the new Abstract as follows:

[ An optical scanning module for use in a bar code reader, including a frame, including a base and a vertical support; a scanning element mounted to the base and including a mirror disposed in the path of an unfocussed laser beam and mounted for oscillatory motion so as to create a scanning laser beam; and a focusing lens, mounted to the vertical support and in the path of the scanning laser beam, for focusing the beam on a target exterior to the module. ]

A scan module for use in a bar code reader including a base, a light source, a focusing lens, a scan mirror mounted for oscillatory motion relative to the base so as to create a scanning laser beam, and a magnifying lens for magnifying the angle of reflection of a light beam from the light source off the scan mirror.
